FREEWAY.

IT LETS YOU MAKE OUTSIDE CALLS WHEN THE OUTSIDE CALLS.

There you are, book at the ready, cool drink at hand, all set for a long afternoon soaking up the sun.

The phone rings.

If you're lucky enough to hear it in the first place, you can almost guarantee it will stop ringing by the time you get to it.

It is for occasions just such as this that British Telecom have introduced Freeway, a new cordless telephone that's sure to make your life easier.

FREEDOM OF SPEECH WITH FREEWAY

As long as you're within 100m of the base unit (of which more later), Freeway lets you make and take calls anywhere around the home, garden or garage

So the phone ringing when you're in the bath, up a ladder or under the car need no longer be a problem. The Freeway goes where you go.

A CORDLESS PHONE WITHIN EVERYONE'S REACH

There was a time when cordless phones were purchased solely by those who could afford their rather high price tag. With the Freeway costing less than £100 at the time of writing, the benefits of the cordless phone are available to almost everyone.

What's more, the Freeway boasts many of the useful features normally found on its more expensive contemporaries.

NOT JUST A COMMON OR GARDEN PHONE

The lightweight handset has a last number redial button that saves you dialling constantly engaged numbers.

There's hi-lo volume control that's handy if you're speaking in a noisy environment.

And a secrecy button allows you to make private remarks without being heard by the person on the end of the line.

On the Freeway's base unit (the part that

stays indoors and charges the handset when it's not being used) there's a page button that allows the user to be contacted from home, and an in-use indicator that shows when the handset is being used to make a call

THE INSIDE STORY

On those days when the weather prevents you working or relaxing outside, you'll find the Freeway just as valuable around the home. It certainly looks at home, a unique two-tone grey colour scheme will complement any decor

Freeway's base unit can be wall-mounted, quickly and simply, using the screws provided.

Freeway is fitted with the new style Inphone plugs which fit into Inphone sockets. British Telecom will be pleased to install these, virtually anywhere you want, quickly and at a reasonable cost.

If you like the idea of being able to make outside calls when the outside calls, you'll find a cordless priceless.

For full details about the Freeway dial 100 and ask for Freefone Telecom Sales or see the full range at your nearest British Telecom Phone Shop.

FREEWAY

Like all Inphones, Freeway is engineered to the highest standards and is fully tested and approved for connection to the British Telecom network. As all cordless phones use radio signals between the handset and base unit, call privacy cannot be guaranteed.

Under ideal radio transmission conditions, Freeway will operate at a range of up to 100 metres from the base unit.

NB The Freeway has been designed to operate on radio frequencies which have been assigned to the exclusive use of cordless telephones. As the use of such telephones becomes more widespread, users may experience a reduction in the quality of service obtainable from this apparatus arising from an increased level of interference.

S/100/3/E450209

We do our best to supply our customers with the apparatus they ask for, but we may have to provide apparatus which does not accord exactly with the descriptions, illustrations and shades of colours shown in this leaflet.

Freeway and Inphone are Trade Marks of British Telecom.
